\*Note: Saskatchewan data not available

Total Canadian Potato Storage Holdings on December 1, 2022 are up just slightly over 2021 numbers but are still 11.7% above the 3-yr. average. Demand is overall strong for both fresh and processing given the short crop in the US and we can see the pull in Eastern Canada with just over 26% of inventory already shipped based on harvest numbers until now. Compared simply to 2021 numbers, only Alberta and Manitoba have shown an increase in the number of potatoes in storage as of December 1st, however *all* provinces except British Columbia are still well above the 3-year average for holdings at this time of

year. Good harvest conditions allowed 99% of the crop to go into storage this year and quality is reported as very good across the country.
